SUMMARY

DevOps Engineer with hands-on experience in CI/CD automation, cloud infrastructure (AWS), Docker, Kubernetes, and Infrastructure as Code (Terraform). Skilled in building and deploying scalable applications, improving release reliability, and ensuring secure, efficient deployments using monitoring and DevSecOps practices. Strong problem-solving mindset with a focus on automation, performance, and continuous improvement.

SKILLS

DevOps Tools & Technologies : Linux, Windows, AWS, Git/GitHub, Docker, Kubernetes, Terraform (IaC), Ansible ,Jenkins (CI/CD), Prometheus (Monitoring), Grafana (Visualization), Bash/Shell Scripting, YAML, SonarQube, Trivy.

Networking Fundamentals : IP Addressing (Public/Private IP), DNS, TCP/IP, Firewalls, Basic Routing Concepts, Load Balancing.

Cloud Fundamentals : Virtual Machines (EC2 / Azure VM), Cloud Storage (S3, EBS, Azure Blob), VPC, Subnets, IAM, Security Groups, Regions & Availability Zones.

Behavioral Skills : Leadership, Decision Making, Communication, Adaptability, Time Management, Ability to Follow Technical Documentation.

EDUCATION

Qualification	Institute	Year	CGPA / Percentage
Bachelor's of Engineering (Computer Engineering)	Sinhgad Institute of Technology, Lonavala	2023 – 2026	9.25 / 10
Diploma in Computer Technology	SNJB'S H.H.J.B Polytechnic College, Nashik	2020 – 2023	84.06%

Experience

Jr. DevOps Engineer
Hisan Labs Pvt. Ltd. | Pune

- Used Git/GitHub for version control and collaborated with teams for smooth releases.
- Managed Docker containers and deployed applications on Kubernetes.
- Provisioned infrastructure using Terraform and automated tasks using Ansible.
- Automated CI/CD pipelines using Jenkins for build, test, and deployment.
- Implemented monitoring using Prometheus and Grafana for system performance tracking.
- Managed Linux servers, including user management, permissions, and troubleshooting.

PROJECT

1) **Deployment of a Three-Tier Application on AWS EKS (Managed Kubernetes Service)**

Summary: Designed and deployed a complete three-tier application architecture on AWS EKS, containerizing services with Docker, orchestrating workloads using Kubernetes, and automating build–test–deploy workflows through Jenkins CI/CD, along with monitoring, security checks, and infrastructure automation for a stable production-like deployment.

Tools and Technology Used: AWS, Kubernetes, Docker, Jenkins (CI/CD), Terraform, Ansible, Git/GitHub, Helm, Prometheus, Grafana, SonarQube, Trivy, Nginx/Ingress Controller.

Outcome: Successfully delivered a highly available and reliable three-tier application on AWS EKS with end-to-end CI/CD automation, faster deployments, enhanced security scanning, and real-time monitoring for improved performance and system stability..

Project : LINK

2) **Monitoring and Visualization for a Kubernetes-Based Application on Grafana with Metrics on Prometheus**

Summary : Implemented end-to-end Kubernetes monitoring by configuring Prometheus to collect cluster and application metrics, and building Grafana dashboards for real-time visualization, performance tracking, and proactive alerting to improve reliability and troubleshooting..

Tools And Technology Used : Kubernetes, Prometheus, Grafana, kube-state-metrics, Node Exporter, Alertmanager, Docker, Linux, Git/GitHub.

Outcome: Achieved complete real-time visibility into Kubernetes cluster health and application performance through centralized dashboards and automated alerts, enabling faster issue detection, reduced downtime, improved troubleshooting and system reliability.
